

Connecting radios all over the world

Remote control your Airbus Tetra radio with VoIP audio.

NetworkInterface LE that connects the TMR880i to IP

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Airbus Tetra radios will give you audio and PTT functions. There is no virtual control head for this radio type.

The system allows for mixing of radio types at the same operator, so that also other radios regardless if they are analogue or digital like Marine band, Air band, DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.
