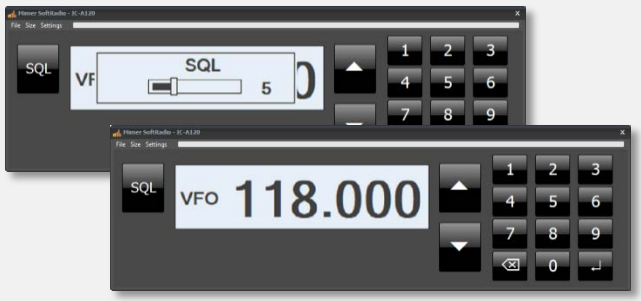
Mimer SoftRadio

Connecting radios all over the world

Airband Radio with VoIP audio
Remote control your Icom IC-A120



Virtual Control Heads of IC-A120

IC-A120 radio unit

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

SoftRadio is also available for FR base stations, IDAS, Icom marine and Icom PoC/WiFi radios.

The remote control option for the Airband Radio Icom IC-A120 includes not only audio and PTT functions but also channel change and squelch setting.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.
