

Connecting radios all over the world

Remote control your Icom radio with VoIP audio

Virtual Control Heads for the Icom F5060 and F5400 shown to the right

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator use a standard Windows PC and standard audio accessories.

Also works with FR base stations, Icom marine and Icom airband radios.

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Icom PMR/dPMR Radios includes not only audio and PTT-functions, but also channel change and display of incoming IDAS ID numbers.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Mimer SoftRadio with four Icom radios connected

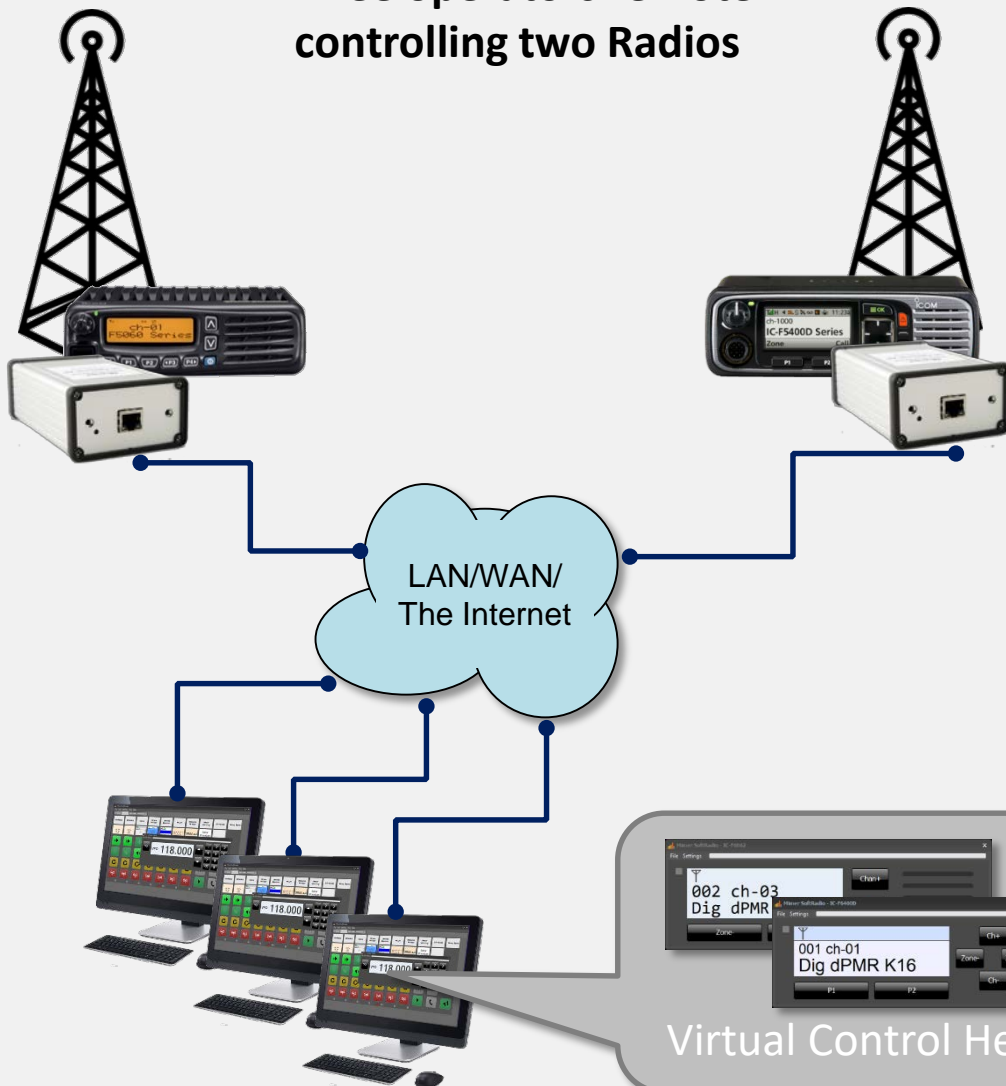

Optionally all audio can be recorded and calls can be cross patched between radio systems.
