

*Connecting radios all over the world*

## PC Dispatch for your Icom IP501H LTE-Radio

**Mimer SoftRadio** is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

The remote control option for the IP501H gives you receive and transmit functionality from your PC. Each operator PC can handle many radios and each radio can be handled by many operators.

**Mimer SoftRadio** allows for mixing of radio types at the same operator, so that also other analogue radios like marine or airband radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

*Mimer SoftRadio with two LTE-Radios, one airband radio and one marine radio. Transmission is active on talk group 2.*
