

Connecting radios all over the world

Remote control your Icom marine radio using VoIP audio

Virtual Control Head of Icom marine radios

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Icom Marine Radios includes not only audio and PTT functions but also channel change, squelch setting, dual watch, power high/low and quick select of CH16.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

Works with IC-M423, M506, M400BB and equivalent international radio models, see webpage for details

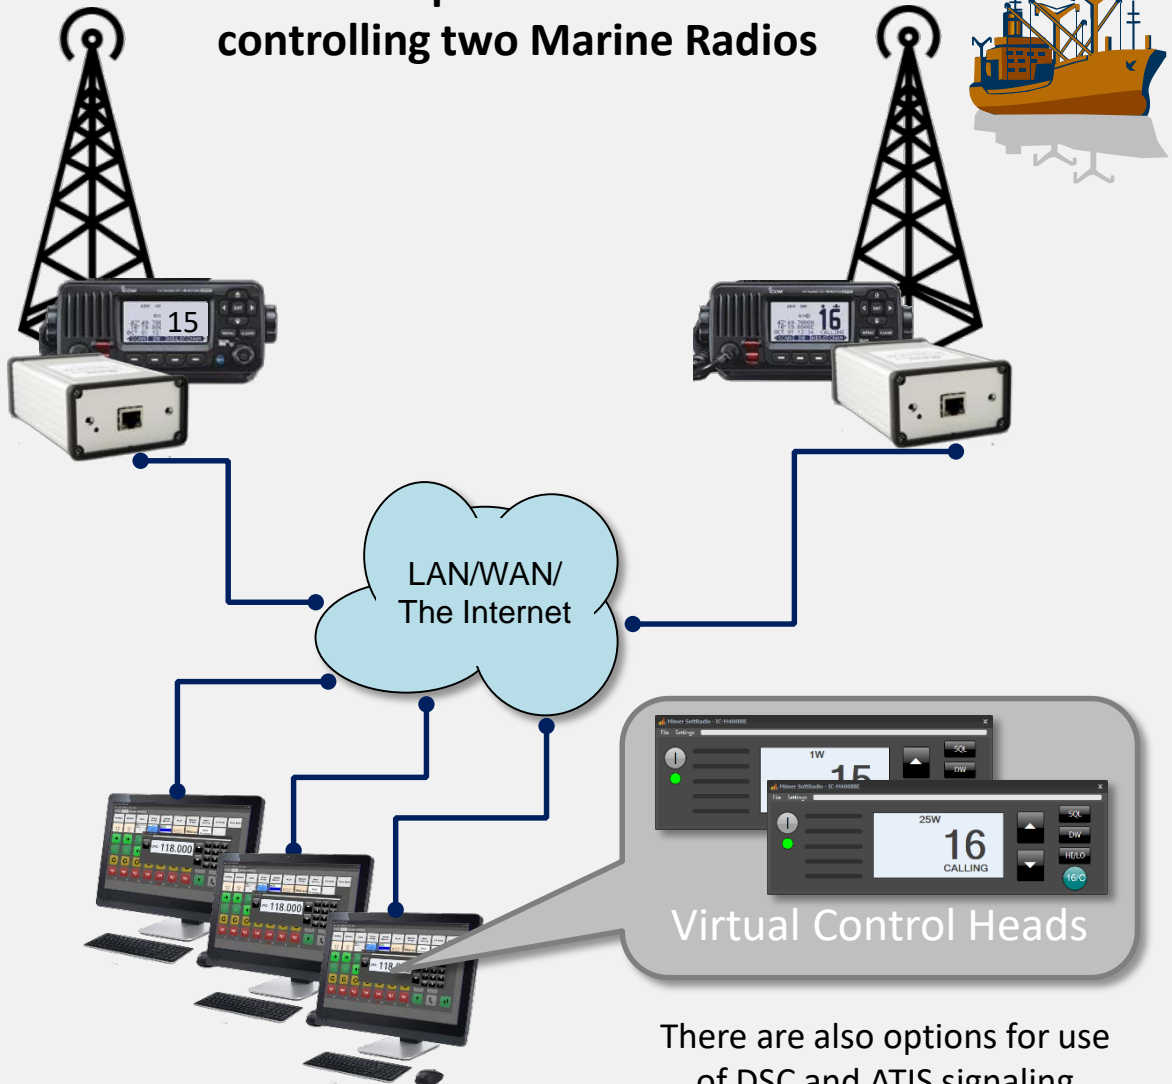

Mimer SoftRadio with four different radios connected
