

Connecting radios all over the world

Remote control your Jotron Marine TR7750C or Airband TR7750 Radio with VoIP audio

Jotron TR7750

Virtual Control Heads for Jotron Marineband version and Airband version

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Jotron Radio TR7750 includes not only audio and PTT functions but also channel change and squelch setting.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios like DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

We have two solutions for remote control of the Jotron radio, one is based on our standard Network Interface and one is based on the ED137 protocol. Please see opposite side for examples and the web page for details.
