

Connecting radios all over the world

Remote control your Motorola Tetra radio with VoIP audio.

Virtual Control Heads of MTM5200/MTM5400/MTM5500

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories. **“-It feels like sitting in front of the radio”**

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Motorola Tetra radios includes not only audio and PTT functions but also talkgroup change, calls, SDS and most of the menu functions.

The system allows for mixing of radio types at the same operator, so that also other radios regardless if they are analogue or digital like Marine band, Air band, DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

Menus available
in many
languages

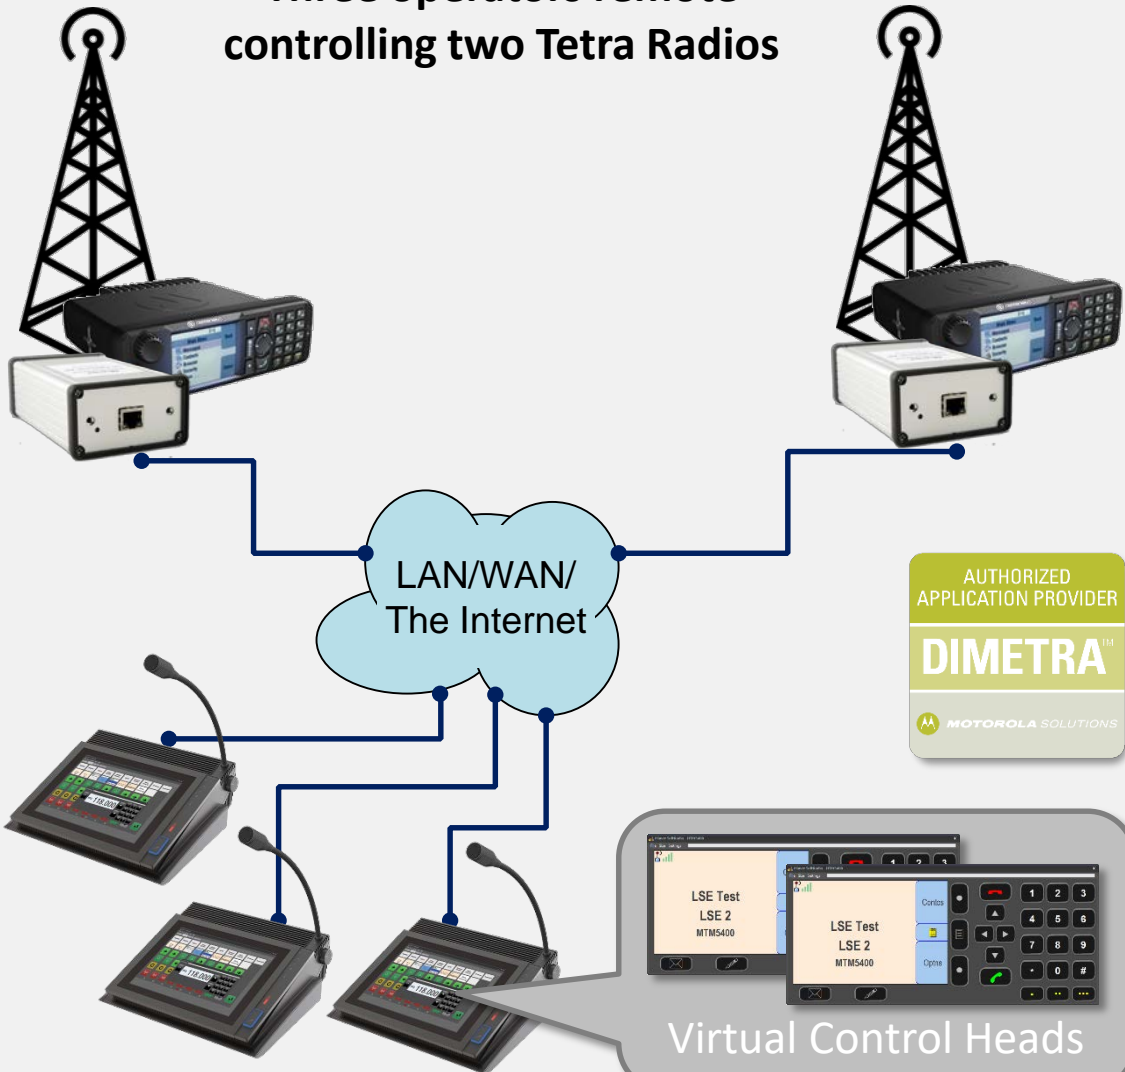

*Mimer SoftRadio with
both Tetra and MotoTrbo*
