

Connecting radios all over the world

Remote control a PA Speaker and Fog Horn from SoftRadio.

Device panel for control of the PA and Fog Horn

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories. **“-It feels like sitting in front of the radio”**

Each operator can handle many radios and each radio can be remote controlled by many operators.

With the special network interface a PA speaker can be connected instead of a radio unit. This means that the radio operator also can make announcements over a PA, using the same software and microphone as for the radio calls.

The interface is preprogrammed with fog horn signals, so that the PA can act as a fog warning, for example, onboard an unmanned vessel.

Also prerecorded voice messages can be used in the PA speaker.

The interface also has a microphone port that can be used for onboard ambient listening.
