

## Connecting radios all over the world

### SoftRadio - Quick start guide

Start the application by clicking on the desk top short cut (or search SoftRadio under the magnifying glass).

The main window will come up that lets you listen and transmit on the connected radios. The main window will have different looks depending on the number of devices that are connected and depending on the settings made during setup.

Many changes can be done under the Settings menu. Please see the help texts for more information.

**Tabs (only XL version)**  
Lets you group devices

**Volume**  
Lets you set the volume per device

**Loudspeaker Button**  
Opens and closes the loudspeakers R/L

**Radio Display**  
Shows part of the radio display and opens the Virtual Control Head

**Name Bar**  
Shows the device name and send/receive w. colors

**PTT Button**  
Transmits on the device

**Active Arrow**  
Shows the last used device

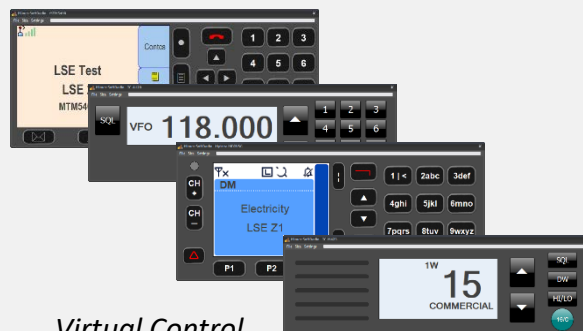

**Resend Button**  
Retransmits the last message

*Example of main window*

For many radio types, SoftRadio has a Virtual Control Head that looks like the radio itself.

With the Virtual Control Head active you can change channels/talkgroups, send messages etc.

It is opened by clicking the name bar or small display of each radio.
